

BUILT WITH **EMERLYN**

Logo and Brand Application Guidelines

AI Automation & Workflow Systems

A practical logo system for website navigation, splash screens, footers, profile marks, favicons, proposals, and portfolio materials.

BRAND PRINCIPLE

The icon represents connected systems, routed information, and forward-moving workflows. The wordmark combines a neutral technical base with a magenta-to-violet emphasis on **EMERLYN**.

Logo System

Use one approved lockup at a time. Do not redraw, stretch, rotate, recolor outside the approved palette, or combine multiple lockups in the same area.

● Primary Horizontal Wordmark

Use in the website navigation bar, proposal headers, document headers, email signatures, and wide layouts. The icon sits left of the wordmark. Keep the descriptor optional at smaller sizes.

Usage note: Minimum digital width: 220 px with descriptor; 150 px without descriptor.

● Secondary Stacked Version

Use where horizontal space is limited but the full brand name is still required, including splash screens, portfolio covers, social banners, and presentation title pages.

Usage note: Keep the icon centered above the wordmark. Do not compress the vertical spacing.

● Icon / Monogram

Use for compact placements such as mobile navigation, browser app icons, section markers, social profile graphics, or decorative brand moments.

Usage note: Use the exact approved monogram. Do not substitute another symbol or reinterpret the geometry.

● Favicon / Profile Mark

Use the circular or rounded-square container for favicons, profile avatars, shortcuts, and platform thumbnails.

Usage note: At very small sizes, simplify the glow but preserve the original shape and color direction.

Color, Contrast, and Neon Treatment

The brand uses one consistent accent family across dark and light modes. Neon effects should enhance the approved icon rather than change its shape.

Deep gradient endpoint

Dark mode

Icon: Use the strongest glow and visible magenta-violet tracing.

Wordmark: BUILT WITH in off-white; EMERLYN in magenta-to-violet gradient.

Glow: Keep bloom controlled so letterforms and icon edges remain crisp.

Recommended use: Splash screen, dark navigation, footer, social banners.

Light mode

Icon: Use the same approved shape with lower bloom and a cleaner outline.

Wordmark: BUILT WITH in near-black; EMERLYN in magenta-to-violet gradient.

Glow: Reduce blur and opacity to avoid a washed-out appearance.

Recommended use: Light navigation, documents, proposals, and light portfolio sections.

Website Application

The same approved logo asset should be reused across the splash screen, navigation bar, and footer. Only scale, placement, and glow intensity may change.

01 Splash screen

Use the stacked composition: neon monogram above BUILT WITH EMERLYN. Do not show the descriptor or tagline. Animate the trace once, then transition into the website within about 1.6-2.0 seconds. Respect reduced-motion settings.

02 Navigation bar

Use the compact horizontal lockup: icon plus BUILT WITH EMERLYN. Keep the icon glow subtle. In light mode, reduce bloom; in dark mode, allow a stronger trace. The logo should link to #home.

03 Footer

Use the primary horizontal wordmark or icon plus brand name. The descriptor AI Automation & Workflow Systems may appear below in small text. Keep the footer treatment calmer than the splash screen.

04 Favicon and profile mark

Use the icon-only circular or rounded-square mark. Avoid fine tagline text. Export at multiple sizes and verify legibility at 16 px, 32 px, 180 px, and 512 px.

Production note: This PDF documents the approved visual concept. For best website quality, recreate and save the final monogram as a reusable SVG asset, then reference that same SVG everywhere rather than generating separate look-alike versions.
